Art Unit: 1631

Restriction to one of the following inventions is required under 37 CFR § 121:

- I. Claims 1-6 drawn to polynucleotides and methods for making polynucleotides, classified in class 536, subclasses 23.5 and 23.1 and class 435, subclasses 6 and 91.1.
- II. Claim 7 drawn to computer methods for identifying polynucleotide sequences, classified in class 702, subclass 20.
- III. Claim 8 drawn to embryonic stem cell lines, classified in class 435, subclass 354.
- IV. Claim 9 drawn to methods for producing antibodies, classified in class 530, subclass 387.1.

The inventions are distinct, each from the other for the following reasons. The polynucleotides of Group I are materially different from, and are therefore independent and distinct from, the embryonic stem cells of Group III. The methods of Group I are not needed to make the embryonic stem cells of Group III. The methods of each of Groups I, III, and IV may each be practiced independently of one another.

Claim 1-9 are drawn to nucleotides, nucleotide constructs, and/or methods requiring the use of nucleotides or nucleotide constructs that contain more than one individual, independent, and distinct nucleotide sequence in alternative form. Accordingly, these claims are subject to restriction under 35 U.S.C. § 121 as outlined in 1192 O.G. 68 (November 19, 1996). This notice permits the examination of from one to ten independent and distinct nucleotide sequences in a single application based upon USPTO resources.

Claim 9 is drawn to large numbers of polypeptides or mentions or requires the use of large numbers of polypeptides. Should applicants elect a Group that claims or mentions more than one polypeptide sequence, applicants are further required to elect one polypeptide sequence within the elected Group for examination on the merits.

Applicant is required to select no more than ONE of the individual sequences for examination. The search of the no more than ONE selected sequence may include the complement of the selected sequence and, where appropriate, may include the subsequences within the selected sequence (*e.g.*, oligomeric probes and/or primers).

Art Unit: 1631

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
